INVESTMENT STRATEGY

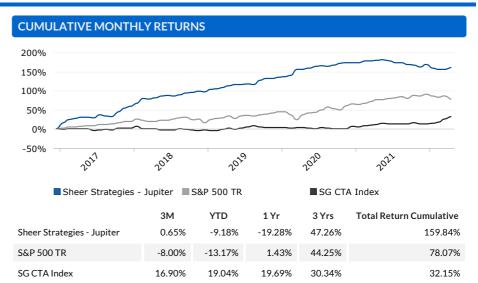

The JUPITER strategy exploits inter-session seasonality variations. At the beginning of each session (Asian, EU, US) information processing frequency by market participants increases and this processing tends to determine price action for the remainder of that specific session. Statistically the processing outcome (as measured by price direction relative to the average of the previous three sessions) seems to be weakly (but significantly) dependent on (combinations of) three fundamental regime attributes:

- 1) USD strength/weakness.
- 2) Risk-on/Risk-off (or neutrality) in risk assets (like AUDJPY and SP500).
- 3) Volatility levels and changes.

The anomaly pertains to a non-uniform and skewed, but relatively stable, distribution of price direction (relative to the previous sessions) across regimes. While the anomaly is qualitatively uniform across geographical sessions systematic liquidity, volume and volatility differences between sessions are parameterized.

DISCLAIMER

Sheer Markets (Cyprus) Limited ("Company") is authorized and regulated by the Cyprus Securities and Exchange Commission ("CySEC") with CIF license number 395/20. This document is for information purposes only and does not constitute an offer or an invitation to subscribe to the portfolios. Although the information in this document is believed to be materially correct, no representation or warranty is given as to the accuracy of any of the information provided. Investment in the portfolios involves significant risks, and any investments should be considered only by investors who can understand, bear the risks and can afford losing their investment.

Past performance is not an indication to future results. This example does not include the fees payable for the strategy (Gross of fees). Performance shown is backtested for the period Jan 2017-February 2020.

Hypothetical Disclaimer: Hypothetical performance results have many inherent limitations, some of which are described below. No representation is being made that any account will or is likely to achieve profits or losses similar to those shown. In fact, there are frequently sharp differences between hypothetical performance results and the actual results subsequently achieved by any particular trading strategy. One of the limitations of hypothetical performance results is that they are generally prepared with the benefit of hindsight. In addition, hypothetical trading does not involve financial risk, and no hypothetical trading record can completely account for the impact of financial risk in actual trading. For example, the ability to withstand losses or to adhere to a particular trading strategy in spite of trading losses are material points which can also adversely affect actual trading results. There are numerous other factors related to the markets in general or to the implementation of any specific trading strategy which cannot be fully accounted for in the preparation of hypothetical performance results and all of which can adversely affect actual trading results.
